SUMMARY

Software engineer with a test-automation core and 4+ years at ClinicMind, a US-based EHR software company, working remotely with a US team. Grew from help-system design to QA automation to software engineering: I fix bugs, build features, and write the Playwright + TypeScript tests that prove them, with 440 merged merge requests on GitLab. I also build AI-powered developer tools, including a self-healing Playwright agent and a RAG app with page-level citations.

SKILLS

Test automation: Playwright, Page Object Model (POM), end-to-end, smoke and regression testing, API testing, accessibility testing (axe), visual regression, Lighthouse CI

Languages & frameworks: TypeScript, JavaScript, Python, SQL, HTML/CSS, Angular, React, Node.js, Express, Django REST Framework, Astro, Tailwind CSS

CI/CD & tools: Git, GitLab, GitHub Actions, Docker, Docker Compose

AI engineering: Claude API, retrieval-augmented generation (RAG), hybrid search (vector + BM25), LLM evaluations, AI-assisted development, prompt engineering

EXPERIENCE

ClinicMind — Remote · May 2022 – Present

US-based EHR (electronic health records) software company. GitLab record: 440 merged merge requests, 717 commits, 203 issues filed, 399 tickets closed.

Software Engineer — **May 2026 – Present**

- Fix bugs and build new features in the EHR web application, shipping every change through GitLab merge requests and code review.
- Pair features and fixes with Playwright tests, so each change ships with automated coverage.
- Use AI coding assistants to investigate defects and draft fixes faster, while keeping every change small and reviewable.
- Demo new features, such as the Help Center, to stakeholders at the weekly project meeting.

QA Automation Engineer — **Sep 2025 – May 2026**

- Built and maintained Playwright + TypeScript end-to-end smoke and regression tests for core EHR workflows.
- Refactored the test suite toward the Page Object Model to cut duplication and make tests easier to maintain.
- Diagnosed failing tests (stale locators, strict-mode violations) and filed reproducible bug reports for developers.
- Wrote and presented the Smoke Test team's weekly report.

Help System Designer — **May 2022 – Sep 2025**

- Wrote feature documentation, release notes, and video tutorial scripts for EHR features, including care plan reports, task management, document logging, and scheduling.
- Answered user questions and support requests, building deep knowledge of the product's clinical workflows.

ESO Electronics (Elexess GmbH, Germany) — Project Engineer — Remote · Jun 2021 – Apr 2022

- Wrote detailed PCB manufacturing instructions and quality checks for production.
- Prepared material quotations for PCB production, handled customer email support, and ran day-to-day operations.

Innovuze Solutions Inc. — Content Engineer Intern Mar – Jun 2018

- Wrote SEO web content, designed PCBs for electronic products, and performed QA testing.

PROJECTS

selfheal-playwright · TypeScript, Playwright, Claude API, ts-morph, GitHub Actions
AI agent that repairs broken Playwright locators. It replays the passing steps in headless Chromium, gives Claude the accessibility tree, DOM, and a screenshot, verifies each candidate locator on the live page, patches only that locator, re-runs the test, and opens a pull request for human review.

pdf-chat-rag · Claude API, hybrid retrieval, Docker Compose
Chat-with-PDFs app that streams answers where every claim links to its source page. Uses hybrid retrieval (vector + BM25 with reciprocal rank fusion), Claude native citations, a click-to-page viewer, evals, and a mock provider so it runs without an API key.

little-lemon-api · Python, Django REST Framework, Djoser
Restaurant REST API with role-based access for managers and delivery crew, a cart and order workflow, token authentication, filtering, throttling, and 58 automated tests in CI.

Portfolio site · Astro, TypeScript, Tailwind CSS, Playwright, GitHub Actions
Personal site with its own quality gates: Playwright end-to-end tests (POM), accessibility and visual-regression checks, and Lighthouse budgets that must pass before every deploy.

More on GitHub, including ai-code-review-action and earlier projects.

EDUCATION & LICENSES

BS Electronics Engineering — University of Science and Technology of Southern Philippines (USTP) 2014 – 2019
Undergraduate projects: image-processing classifiers (Python, MATLAB, SVM) for fruit disease and defect detection; Raspberry Pi automatic irrigation system with web control.

Licensed Electronics Engineer (passed on first attempt) and **Licensed Electronics Technician** — Professional Regulation Commission (PRC), Philippines 2021

CERTIFICATIONS

- **IBM Full-Stack Software Developer Professional Certificate** — IBM (Coursera), 2025
- **Meta Full Stack Developer courses** (9 certificates: JavaScript, React, Advanced React, Python, back-end databases and more) — Meta (Coursera), 2026
- **Playwright Power Techniques** — Coursera, 2026
- **CI/CD for Test Automation: Jenkins & GitHub Actions** — Packt (Coursera), 2026
- **AI Agents in TypeScript/JavaScript with Generative AI** — Vanderbilt University (Coursera), 2026
- **Google AI Prompting Essentials** — Google (Coursera), 2025
- Also: Google Project Management (2024), Google Data Analytics (2024), Google Digital Marketing & E-commerce (2025). Full list with verification links on my portfolio.
